

GRID Aids is Gay-related immune deficiency

February 19, 2010

[World news net](#) includes news about **Grid Aids** today. This is sometimes informally called the gay plague or GRIDS which was the 1982 name first proposed to describe what is now known as AIDS, after public health scientists noticed clusters of Kaposi's sarcoma and Pneumocystis pneumonia among gay males in San Francisco and New York City. During the early history of AIDS, an ad hoc organization called Gay Men's Health Crisis was founded to combat what appeared to be a homosexual-only disease produced by sexual promiscuity, intravenous drug use, and/or usage of poppers. Soon after, clusters of Kaposi's sarcoma and Pneumocystis pneumonia were also reported among Haitians [recently entering](#) the United States and men with hemophilia, among female sexual partners of AIDS patients, and among blood transfusion recipients with no obvious risk factors.

Grid Aids was [replaced](#) with the term AIDS (for acquired immune deficiency syndrome) was proposed in 1982 by researchers concerned with the accuracy of the disease's name. In this new name, scientists were supported by political figures who realized that the term "gay-related" did not accurately describe the demographic that the disease affected. On April 23, 1984, the U.S. Department of Health and Human Services Secretary announced at a [press](#) conference that an American scientist, Robert Gallo, had discovered the probable cause of AIDS: the retrovirus subsequently named human immunodeficiency virus or HIV in 1986.

Homosexuals, drug users and sex workers and their [clients](#) are the ones at greatest risk for GRID/AIDS "I believe the Lord was right when He told His creation that sex needs to be within the confines of [marriage](#) as one man and one woman " why? So you do not get hurt. That's the main reason I speak out against homosexual sin because homosexual behavior is at a higher risk of getting AIDS/GRID. Being involved with drugs and also prostitution and other sexual activity outside of marriage leads to disease, as the research indicates. Aids still kill more adults than all wars and conflicts combined, and are vastly bigger than current efforts to address it.

A joint WHO/UN Aids report showed that nearly three [million people](#) are now receiving anti-retroviral drugs in the developing world, but this is less than a third of the estimated 9.7 million people who need them. In all there were 33 million people living with HIV in 2007, 2.5 million people became newly infected and 2.1 million died of Aids. Thus, refrain from drug abuse and immoral acts for your own health. Protect yourself from this live taking Grid Aids. This is all in world news net for now.
